

PROFESSIONAL DIGITAL THERMAL-STIMULATOR

TSM 2000 – HARMONY TEKNO

With HARMONY TEKNO by DRAGHETTI, Metalplast has the ambition to offer a truly innovative device, the first one with the dynamic control system of the programs (CDPS) and touch screen control panel

We have used the best technology to create a truly simple product, but of absolute performance. With the new CDPS system, the microprocessor automatically controls in the best way time, temperature and ventilation parameters, modifying them in the course of work according to what is most suitable for each hairstyle.

All the hairstylist has to do is to select the program from the main menu and the device will immediately start with the most suitable program.

The set of 16 pre-set programs freely editable by the stylist, along with 10 other programs completely free to be customised by each stylist to suit your preferences permit management in a complete independent manner of all HARMONY functions in a simple and natural way.

At any time it is possible to intervene in order to change one of the parameters (ventilation - temperature - time) allowing the computer to better manage the remaining functions. At the end, changes can be saved or the program can remain unchanged.

If while working on the software you make a mistake, this is not a problem. Harmony Tekno has a software in its program to restore the original functions at any time.

- TSM2000 Version –

- DCSP dynamic control system of the programs
- Digital control of all functions with microprocessor
- Touch screen graphic display
- Touch sensitive keyboard
- No. 16 pre-set programmes
- No. 10 freely editable programs
