Multispeed professional hair drying hood

HDR599 Version – 5 ventilation speeds controlled by an electronic card with noise filters, timer, thermostat and temperature indicator light.

The 1st speed reduces ventilation to 380 rpm to make the most of the hairstyles and technical styles that need to be done with almost no ventilation.

The 2nd speed to handle the technical styles with customers who prefer to feel a minimum ventilation.

The 3rd speed for normal drying.

The 4th speed for fast drying.

The 5th speed allows for time saving ultra fast drying.

Double-loop stainless steel armoured resistance, power 1100 watt.

The greater development of the resistance allows for less stress hence increasing its duration.

Dome which can be opened, with a visor. Nylon hinge in the head at 20000 consecutive opening / closing cycles.

Available in several colours and versions with stand or wall arm.

115 volts version available upon request.

HDR999 Version – The best for ventilation management.

The rotation speed of the motor is controlled by an electronic card that allows to vary motor rotation from 380 rpm to 1300 rpm to constantly have the possibility of choosing the optimum amount of air for the style that is being created.

The card has noise filters to avoid interference with the audio system in the salon. Timer, thermostat and temperature indicator light.

Double-loop stainless steel armoured resistance, power 1100 watt.

The greater development of the resistance allows for less stress hence increasing its duration.

Dome which can be opened, with a visor. Nylon hinge in the head at 20000 consecutive opening / closing cycles.

Available in several colours and versions with stand or wall arm.
