## Professional hair steamer with ozone emission

### VPO 800 – EKOVIP OZONO

The use of the steamer to create of the best technical treatments is a need felt by all hairstylists. Steam opens hair scales allowing technical treatments such as dyes, perms, bleaches, streaks or healing therapies to quickly and deeply penetrate into the hair structure.

Treatments will last longer and the hair will be soft and shiny for a long time.

All EKOVIP equipment have a boiler and a resistance completely made of stainless steel and with the "pre-heat system" they are immediately ready to work without having the customer waiting for the equipment to heat up.

A large tank allows to use the equipment for a wide range of applications without any interruption and a light and audible signal warn the user when it has run out of water.

The inclination of the transparent dome can be adjusted and it has a wide diameter for maximum user convenience.

Its design is smooth and simple without visible external boilers which get dirty with limestone or with water from the recovery tanks.

Its recovery tank is in the body of the equipment and has an exhaust valve to comfortably empty it, in case of overflow a recirculation system reinstates water in the boiler.

**OZONE** The ozone generator lamp, present in the specific version, makes the steam very rich in oxygen and highly oxidising to make products quickly and accurately adhere to the hair by stimulating the scalp and helping in hair growth and dandruff.

#### VPS800 Version –

- Timer with buzzer
- Switch to control steam and temperature (max. - min)
- Ignition switch for the ozone generator lamp
- Power light
- Missing water light and buzzer.
- Integrated condensate recovery tank.
- Resistance made of stainless steel.
- Adjustable inclination dome.

Available in silver and black and in versions with stand or wall arm.

115 volts version available upon request.
