

MULTI-SPEED ION EMITTING HAIR DRYING HOOD

HDR501 JP Version – HAIR DRYING HOOD with an innovative system for 2K ion emission

The advantages of the already known and appreciated ionic system on blowers is now available on our hoods. Ions break down water particles so that drying is even faster. The electric charge of ions prevents the annoying static reactivity of hair making it softer with silky look and unique brightness.

5 ventilation speeds controlled by an electronic card with noise filters, timer, thermostat and temperature indicator light.

The 1st speed reduces ventilation to 380 rpm to make the most of the hairstyles and technical styles that needs to be done with almost no ventilation.

The 2nd speed to handle the technical styles with customers who prefer to feel a minimum ventilation.

The 3rd speed for normal drying.

The 4th speed for fast drying.

The 5th speed allows for time saving ultra fast drying.

Double-loop stainless steel armoured resistance, power 1100 watt.

The greater development of the resistance allows for less stress hence increasing its duration.

Dome which can be opened, with a visor. Nylon hinge in the head at 20000 consecutive opening / closing cycles.

Available in several colours and versions with stand or wall arm.
